

AIRO

Innovation as Standard

Safety and Productivity by Design

The name Airo is derived from Ancient Greek meaning “to rise or lift” and that is exactly what you can expect when choosing them, an advantage over your competitors. Unrivalled for quality and standard features, each Airo model comes loaded with technology and reliability that sets them apart from any other brand.

By using the most advanced state of the art technology and pioneering development processes, you can expect to achieve an average 15%-25% longer working cycle from your Airo, couple this with the most efficient and high power battery chargers, your Airo will not only outlast the rest before re-charging is required, it will also be ready to go again much sooner thanks to their “fast charge” capability.

As if longer working and shorter charging times aren’t enough of an advantage, fully compensated hydraulics allow for ALL the boom functions to be operated simultaneously at full speed without loss in performance. This unique feature gives you the fastest lift/lower times and also makes Airo the most controllable platforms in the WORLD!

It doesn’t stop there! Each “X” series scissor lift has the largest platform, highest occupancy and rated load available on the market.

This means that apart from being able to lift more, you can also have more people in the platform to assist you, another unique STANDARD feature!!

With over 50 models to choose from and working heights between 3 to 25 metres, whether you need narrow aisle access or to breach the roughest terrain, Airo has a model to suit your requirements.

ENDURING DESIGN

Built using high yielding steel, each and every Airo is designed to last a lifetime.

Corrosion resistant steel hydraulic lines are preferred, with flexible hoses only being used where movement is necessary.

Readily accessible compartments make servicing and maintenance easy.

Electrostatic coatings form a positively charged ionic bond to the underlying metal work, making for a very high quality long lasting cosmetic finish.

- Finest quality
- 24 months Warranty
- Long working cycle
- Rapid “fast Charge”
- Multi- function

AIRO OPTIONS

Already loaded with technology and advantages, there is still plenty to add.

With over 100 different options to choose from, Airo has an unrivalled choice to match any environment or sector application.

Whether you need harsh environment or corrosion protection (see galvanized option image) or additional help from non-marking tyres, right up to Atex blast and explosion proofing, the Airo range of equipment is unrivalled for standard factory fitted options. These are not expensive after market "bolt ons" from third party suppliers, EVERY option is available pre-arranged direct from the factory and delivered to you – fully compliant and ready to work.

deckRailXtra®

The deckRailXtra® system is designed to safely restrain and hold materials in place, allowing freedom of movement for the operator without any intrusion into the platform deck area.

The deckRailXtra® system has been manufactured using state of the art engineering principles and an innovative, harmonised design approach, both ergonomic and intuitive to use, the whole system perfectly complementing the MEWP it is attached to.
